

AMENDMENTS TO THE SPECIFICATION

Page 3, Para. 1

According to one aspect of the present invention there is provided a weapon stock, adapted to receive a firing assembly including a barrel and a receiver connected to the barrel, said stock having a first pistol grip interposed between a first forestock located towards a forward end and a buttstock located towards a rear end, such that in assembly with said firing assembly, said barrel is located adjacent to said first forestock towards said forward end, ~~characterised in that~~

said stock further includes an elongated lower second forestock element spatially separated below said stock for at least part of its length at a location substantially at or below the first pistol grip and extending for a distance equal to or less than the distance between the barrel end distal to said receiver and said rear end of said buttstock, said second forestock being attached to said stock at two or more attachment points wherein at one or more said attachment point(s) the second forestock is not integrally formed with said stock-,

characterised in that the second forestock lies in substantially the same plane as defined by the firing assembly, first forestock and first pistol grip, and extends below all pistol grips and operational features of the firing assembly:
